

Tailor-made Automation
Designed for You

Realizing an open automation system tailored to your needs is easier than you think when you partner with Inpeco, the global leader in Total Laboratory Automation. Our **Customer Solutions Team** deploys experts in workflow design, simulation modeling, layout drawing, system installation, training, and service to achieve one goal: to provide you with a game-changing automation solution that enhances your lab's productivity, drives premium quality results, and grows with your needs. We ensure your key stakeholders and decision makers are included in every step of the design process:

The Way to Your **Tailor-made Automation Solution**

WORKFLOW ANALYSIS

- Analyzing your current state workflow, we identify pain points and define future state requirements and KPIs
- We deliver insights analyzing historic IT and LIS data
- Working closely with you, we define the project scope and the desired future workflow

AUTOMATION DESIGN

- Our Layout Drawing Team provides several design options for your future lab
- All options are reviewed and tuned with you to create your final design
- Final design options are challenged against your growth and performance objectives via simulation modeling

IMPLEMENTATION

- Together with you, our Customer Solutions Team will define an Implementation Plan
- The Implementation Plan will include installation, training, change management and support
- A dedicated Inpeco team will support your team on site to achieve the performance improvements and KPIs defined by your lab
